# CleanMeNext™

## Mobile housekeeping & maintenance. Paperless. Simply saves time & money.

As a hotel owner & operator, you focus on increasing revenue and customer satisfaction while lowering operating costs. **CleanMeNext** provides a simple, easy-to-use system that will help you achieve those goals. CleanMeNext's housekeeping and maintenance platform integrates with AutoClerk PMS to greatly increase the efficiency of housekeeping and maintenance staff. It provides real-time information on room occupancy, cleanliness, maintenance issues, and guest requests. Additional features like visual lost and found and guest text alerts rounds out CleanMeNext's ability to improve the guest experience.

## Core Efficiency by design

- Room cleaning assignments to housekeeping staff completed in seconds rather than minutes, with improved accuracy.

- Assignment list automatically ordered in real-time based on settable "single-click" room priorities.

- Automatic room re-assignment throughout the day based on changing staff availability and priorities.

- Housekeeping notes entered by staff are automatically converted to each staff's native language.

- Housekeeper & front desk will always know, in real-time, which rooms are currently being serviced by housekeeping staff.

- Visual maintenance reports & soiled room reports created with 3 taps.

- Visual lost and found allows cleaning staff to immediately report left-behind items.

- Complete at-a-glance real-time and historical status of all room-cleaning and maintenance tasks and staff.

## Improved Hotel Guest Satisfaction

- Immediate text notification when an assigned room is ready for check-in.

- Visual lost and found enables guests to quickly reclaim left-behind items.

## Two-way Integration with AutoClerk PMS automatically connects, 24/7, front-of-house with back-of-house.

- PMS is always kept current with clean & ready-to-rent rooms.

- Housekeeping staff is always kept current with latest front desk activity.

- Eliminates redundant data re-entry thus saving time and reducing errors.

- Availability of guest mobile phone numbers allows front desk staff to text in-coming guests regarding room availability for checkin, or alert departing guests of left behind tems.

- CleanMeNext room list setup is automated, allowing immediate turn-key activation of CleanMeNext features.

- Each housekeeper's assignment list can be automatically prioritized by "reserved room" and "priority guest" status.

- Allows front desk to see actual, realtime status of a room — clean, dirty, repair-required, cleaning staff in room, etc.

- Maintenance staff can immediately determine when a room is unoccupied and available for repair work.

## Easy to use

- CleanMeNext is pure cloud, requiring no software to install or maintain. Software is always up-to-date.

- Works on Windows, Mac, iOS, and Android.

- Familiar modern and intuitive user interface takes only minutes to learn.

- Designed by hotel operators and refined through years of "real world" use.
