

AutoClerk's ResOnTheWeb™

WEB BOOKING ENGINE

925-871-1810

An advanced **web booking engine** that connects your property's proprietary website to your AutoClerk® Property Management System.

- ResOnTheWeb's two-way interface delivers up-to-the-second room rates and availability. Reservations automatically flow from your hotel's website to the AutoClerk PMS at your hotel. No manual data entry is required.
- Once you set rates in your AutoClerk PMS, the rates are immediately available on ResOnTheWeb.
- ResOnTheWeb can sell your last available room because the two-way ResOnTheWeb interface is realtime.
- The reservation confirmation number provided to the guest is the AutoClerk confirmation number.
- The availability calendar has information balloons that display the minimum and maximum rates, along with the minimum stay requirements for any date.
- If you do not want your entire room inventory available on ResOnTheWeb, AutoClerk holdbacks can restrict, day-by-day, the number of rooms sold either by room type or by run of house.
- You can set minimum Length-of-Stay (LOS) requirements, valid/invalid arrival/departure days and cancellation periods for any date. All stay requirements can be specialized for individual room types, rate classes and/or packages.
- Guests receive email confirmation letters that can be customized with your hotel's graphics and policies.
- Customers can be automatically redirected to other properties in your group when one property is sold out.

- Your guests can book either by room type or by room number.
- Group members can enter their own reservation, subject to group master allocation and rates, thereby reducing call traffic to the property.

Premium Support

- AutoClerk configures and supports the ResOnTheWeb two-way interface to ensure a seamless connection.
- AutoClerk will customize your web booking engine with your hotel's logo, graphics, wallpaper, and room description to match the look and feel of your website.

NEW Mobile Enabled

- ResOnTheWeb is mobile friendly! Guests checking hotel availability/rates or booking a reservation via a mobile device are presented with easy-to-read mobile screens & one-thumb friendly data entry.

NEW TripAdvisor

- TripAdvisor's TripConnect interface allows guests visiting www.tripadvisor.com to link directly to hotel's ResOnTheWeb booking engine, thus bypassing expensive OTA booking engine channels.
